

# Portfolio insurance

---

- Downside risk protection algorithm
- Four methods for portfolio insurance
  1. Trading stocks and options
  2. Using option pricing models
  3. CPPI
  4. TIPP
- CPPI (Constant Proportion Portfolio Insurance)
  - Black and Jones (1987)
- TIPP (Time-Invariant Protection Portfolio)
  - Estep and Kritzman (1988)

# CPPI

- (1) Total Investment Amount (Asset Value,  $AV=CPPI=100\%$ )
- (2) Protection Floor ( $F = 85\%$ )
- (3) Cushion =  $CPPI - F = 15\%$
- (4) Multiplier ( $M = 4$ )
- (5) Risky Asset ( $E = M * C = 60\%$ )
- (6) Safe Asset ( $B = 100\% - 60\% = 40\%$ )

# CPPI algorithm

---

1. Total Investment = \$100
2. Floor = 85%
3. Multiplier  $M = 4$  (3 ~ 8)

## Repeat

4. Cushion ( $C = CPPI - F = 15\$$ )
5. Risky Asset ( $E = C * M = 15 * 4 = 60\$$ )
6. Safe Asset ( $B = AV - E = 40\$$ )
7.  $CPPI = E * (1 + \text{return}) + B * (1 + \text{safe\_return})$
